Artifact Evaluation

ICSE 2020

About Call for Submissions

According to ACM's "Artifact Review and Badging" policy, an "artifact" is a "digital object that was either created by the authors to be used as part of the study or generated by the experiment itself." Artifacts can be software systems, scripts used to run experiments, input datasets, raw data collected in the experiment, or scripts used to analyze results. The review of artifacts of accepted research papers increases the likelihood that results can be independently replicated and reproduced by other researchers.

In this spirit, the artifacts track aims to review, promote, share and catalog the research artifacts of software engineering papers. Authors of the papers accepted to the Technical Track can submit an artifact for evaluation as a candidate reusable, available, replicated or reproduced artifact. For the first time, authors of any prior SE work (published at ICSE or elsewhere) are also invited to submit an artifact for evaluation as a candidate replicated or reproduced artifact. The top two artifacts selected by the program committee will be awarded the best artifact awards.
